

Fana Asmelash

Software Engineer

Education

AkiraChix
codeHive - Diploma in Information Technology
February - November 2025

Mekelle Institute of Technology(MIT)
Computer Science and Engineering
October 2024 - January 2025

Experience

Krinfud Digitals
Full-Stack Engineering
February 2026 - present

MW Trading PLC
Frontend Developer & UI/UX Designer
March 2024 - September 2025

Relevant Courses

- Backend Development
- Frontend Web Development
- Mobile Development
- Data and Machine Learning
- User Experience (UX) Research
- UI/UX Design
- Product Management
- Quality Assurance

Personal Statement

The gaming industry has always been on the front lines of innovation, a space where imagination pushes the limits of what technology can do. For Fana, it's more than entertainment; it is where she first discovered her love for creativity. What began as a love for games quickly grew into a passion for using technology to explore new possibilities. Thrilled to make her mark in tech, Fana is driven to help shape the future of gaming where innovation leads and possibilities are endless.

Skills

Collaborated with a team to develop **IddirNet**, a platform for Ethiopian communities, enabling transparent payment tracking and resource monitoring through data-driven insights.

- Conducted both desk research and primary data collection to analyze the problem and identify possible solutions.
- Designed brand assets including logos, brand guidelines, and user interface designs, using Figma, Adobe Illustrator, and Photoshop to enhance brand aesthetics.
- Integrated external APIs i.e. Daraja API and internal APIs to enable robust functionality and data exchange.
- Developed an informational website and an admin dashboard using Next.js to highlight real-time analytics and clear data visualizations.
- Developed a mobile app using Kotlin to provide members with accessible data and user-friendly interface for members to easily track contributions and resources.

Worked on a team case study to develop data-driven solutions addressing the decline in sales among 'Mama Mbogas' (women selling groceries at kiosks).

- Utilized PostgreSQL to create relational schemas that represent complex relationships among attributes.
- Developed APIs with Django REST framework to manage user data efficiency.
- Created system architecture diagram to illustrate both data flow and the interactions between individual components of the system.
- Conducted unit and integration testing to maintain software quality.
- Developed and implemented a Mama Mboga Advisor AI that provides guidance for maintaining vegetable freshness.

Developed an innovative conversational **Movie Recommendation** system by leveraging

- IMDB dataset and preprocessed dataset using Pandas and NumPy, ensuring data quality by filtering sparse entries and enhancing text with SpaCy lemmatization.

Built Benenew, an online gift registry platform that enables users to create, customize, and share gifts for occasions or events.

- Built RESTful APIs using Node.js, Express.js, and JWT authentication for user management.
- Integrated Chapa Payment API to enable secure online monetary contributions.

Customized and maintained the **Birhan Addis Charity Organization** website using WordPress and Elementor, ensuring a responsive and user-friendly design

Projects

IddirNet - Developed a platform that digitizes Ethiopian Iddir communities (community support institutions) by enabling secure digital payments and fair resource management to enhance accountability and transparency.

- Research Report: [IddirNet Research Report](#)
- Product Requirements Document (PRD): [IddirNet PRD](#)
- System Architecture: [IddirNet system architecture](#)
- User Interface Design: [IddirNet Design](#)
- Schema: [IddirNet ERD](#)
- Informational Website: [IddirNet website](#)
- IddirNet Mobile App: [IddirNet App](#)

SafiGreens - Built an end-to-end native mobile app to connect "mama mbogas" (local vegetable vendors) with nearby customers to increase their sales, along with an admin dashboard.

The projects are:
